

ABSTRACT OF THE INVENTION

An assembly for forming multiple individual compound desserts in a predetermined dome shape including a base tray having a plurality of recessed cavities to form a base for said compound dessert. A rack and a plurality of dome shaped bowl assemblies secured in a fixed position to said rack. Each bowl assembly is formed with a closed semi-spherical end and an open end forming a cavity, and a cover member which is mounted over said open end, the cover member having an inner bowl extending therefrom which extends into the cavity.
